

CONVERTING A WALL INTO A HIGHLY PRODUCTIVE VEGETABLE OR HERB GROWING FACILITY.

Tasty and fresh Bak Choi grown in Autopot Window Boxes. No power is required as it works by gravity.

Nutrient Tank.

Here, 4 units of Autopot window boxes are mounted on a wooden panel (or brick wall). You can grow lettuces, herbs and any other shallow rooting vegetables successfully for home consumption with very little effort.

You can extend the lifespan of the lettuce crop by picking the leaves when needed.

You will be surprised how much you can get out of a simple growing facility made up of a few growing units.

Just imagine. No digging. No weeding. No day to day hand watering. No power. Can be left unattended for weeks or months. It's clean. It's simple.
WHAT MORE CAN YOU ASK FOR!

This wall of colours with Petunia Purple Craze with only 7 units of Autopot Window Boxes.

Tuberous Begonia illumination series in Autopot Window Boxes which have been completely covered by the plants.

Autopot Window Boxes used to great effects with Recbekia mixed with Lobelia for bordering a Café outdoor area.

Even cacti are doing extremely well in an Autopot Window Box. These plants have been in the System for 4 years.

Imagine again. You can grow vegetables like lettuces, Bak Choi, Spring Onion along side with herbs like Coriander, Mint, Pennywort or Basil. You also grow lovely flowers like Petunia, Geranium, Nodding Violet and even Orchids ! **IT'S TRULY AMAZING.**

Window Box Updated Sunday, May 03, 2009

Notice: Prices are subject to Change without notice.

Carefree Window Box

- . It's simple.
- . Watering and feeding is automatic.
- . Works by gravity and no power required.
- . It's clean and hygienic.
- . Virtually maintenance free.

Carefree Herb Garden is truly a practical and functional garden for homes.

- Simple to use:-**
- plant the seedlings into the small 4 or 5-inch pots with normal potting mix
 - simply drop the pots into the slots
 - fill up the reservoir tank with water and nutrients and not to allow it to run out of water
 - thereafter, the Smart-valve will know exactly how to water and feed your plants correctly
 - in less than 4 weeks, your effort will be rewarded with lovely herbs and vegetables ready for the picking
 - you can grow practically any shallow rooting plants successfully
 - including Cyclamens, Violas, Pansies, Labellias, Bridal veil, Petunia etc.

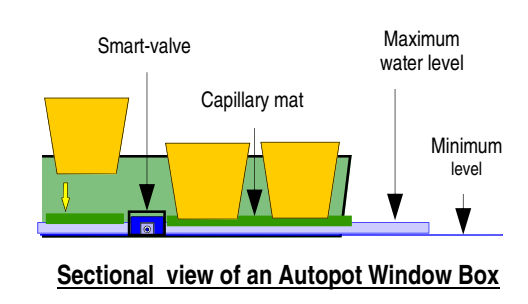

PLANT DRIVEN CONCEPT

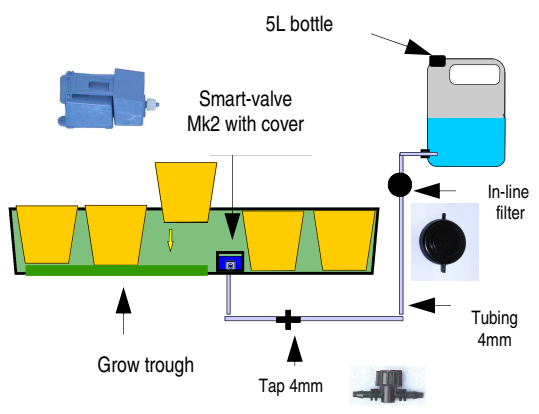

Smart-valve Mk2.

The answer lies with the fact that the System is “Plant Driven”. Which means that the plants in each growing unit are in control of when and how often it should be watered. This is made possible by the built-in Smart-valve.

WORKING PRINCIPLES

SET UP OF A SINGLE GRAVITY UNIT

As shown in the diagrams above, the Smart-valve is connected to the reservoir by a 4mm tubing. In the beginning, nutrient solution from the reservoir will be allowed by the Smart-valve to flood 30mm of the Herb Garden trough. No more nutrient solution is allowed into the Herb Garden trough until the initial consignment of nutrient solution is completely taken up by the plants. Once that happens, the Smart-valve will automatically release another consignment of 30mm of nutrient solution into the trough. The frequency of the nutrient solution release is dependent on how thirsty the plants are.

THE PRODUCT

- The Carefree Herb Garden comes in two packages:-
- A) Basic Kit consists of:-**
1. 1 unit grow trough (800mm x 220mm x 140mm)
 1. 1 Smart-valve Mk2
 1. 1 instruction booklet
 4. 4 x 150 mm pots
 5. 1 tap 4mm

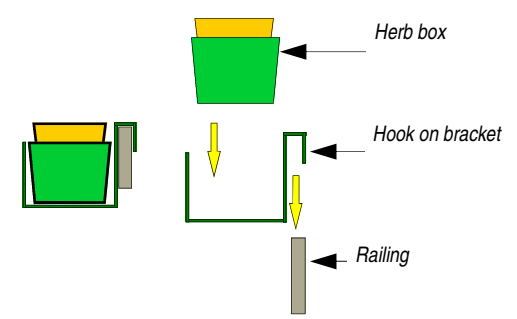

B) Complete Kit consists of :-

1. 1 unit grow trough with grommet (800mm x 220mm x 140mm)
1. 1 Smart-valve Mk2
1. 1 Tubing 2M 4mm
1. 1 in-line filter
1. 1 tap 4mm
1. 1 Five-litre bottle with grommet
1. 1 L A & B nutrients
4. 4 x 150mm pots
9. 1 instruction booklet

WALL BRACKETS

EXTENSION

Your herb garden can be easily extended feeding off a single reservoir. It is a matter of using larger tank to cope with the increase volume of water required to maintain the entire set up. Use any kind of container that can hold a sufficient volume to last for at least one week. As a guide, each herb box unit require about 1/2 a litre of water a day in Summer when the plants are full grown.

\$25.00

You can use a larger tank for feeding several Autopot window boxes by gravity. A 30 litre tank as shown in the picture will be sufficient to provide water enough to last for several weeks.
